DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not contaminate feed or food. Keep children and pets away from treated area until product is worked and watered into soil and treated areas are completely dry.

1. WHAT IS THIS PACKAGE FOR?

This package of ferti•lome® Systemic Insecticide Granules protects plants such as Roses, Chrysanthemums, Azaleas, Pyracantha, Spires and Birch from damage by Aphids, Spider Mites, Thrips, Leaf Miners, Whiteflies, Lace Bugs and Leafhoppers. ferti•lome® Systemic Insecticide Granules enters a plant through its roots (systemic action) and is then moved to all parts of the plant through natural growth and sap flow. Working from inside of the plant, it controls the listed sucking type insects that feed on this plant.

2. HOW DO YOU USE IT?

Apply the ready-to-use granules uniformly (see Recommended Application) to the soil around the base of the plant. Mix the granules into the top soil, then water. The chemical, released from the granules, will reach into the root zone and be absorbed into the plant. The granules can also be scattered over planting beds and mixed into the top soil before sowing seed or setting bulbs or transplants. Additional applications of ferti•lome® Systemic Insecticide Granules can be made at 4 to 6 week intervals as needed to maintain insect control after the plants start to grow.
