

ACCEPTED

JUL 16 1975

Under the Federal Insecticide,
Fungicide, and Rodenticide Act,
as amended, for the pesticide
registered under
EPA Reg. No. 7401-78

1. WHAT IS THIS PACKAGE FOR?

This product, especially formulated for the "do-it-yourselfers", makes home termite control easy and economical.

2. HOW DO YOU USE IT?

Premises treated with a 1% ferti-lome TERMITE SPRAY solution will give you residual control for a minimum of 5 years.

SUBTERRANEAN TERMITES—Directions for Non-Professional Use. Spot treatments are not adequate for termite control. Use ferti-lome TERMITE SPRAY in a 1% water emulsion: Prepare by mixing 4½ tablespoons in 1 gallon of water. Use proportionally larger amounts for larger jobs. Closely follow directions for your type of construction, using chart below as a guide for type of treatment, coverage and container size:

TREATMENT TYPE	ONE QT. CONTAINER NOTE:	ONE GAL. CONTAINER
Area to be covered by Slab or Basement floor	140 sq. ft. (regular fill dirt) 98 sq. ft. (coarse fill dirt)	560 sq. ft. (regular fill dirt) 392 sq. ft. (coarse fill dirt)
Area around Expansion Joints and Utility Inlets	7 linear feet	28 linear feet
Feet of Trench, one foot deep	35 linear feet	140 linear feet

NOTE: The one quart size is largely to supplement the coverages obtained by the gallon size for wooden fences and small out buildings.

AREAS TO BE COVERED BY SLABS OR BASEMENT FLOOR:

Apply 1 gallon per 10 sq. ft. as an overall treatment under area to be covered by slab. Apply 2 gallons per linear foot to areas around expansion joints and utility inlets. If fill is coarse, use 1 gallon per 7 sq. ft.

For effective termite control, It is necessary to provide a soil poison barrier through which the termite must pass to gain access to the wood. Other critical areas may also require treatment. It is suggested that you consult the State Extension Service for advice.

BUILDINGS HAVING BASEMENTS OR CRAWL SPACES: Dig a trench along the inside and outside of the foundation walls, around all piers, porch fills and other critical areas. In brick or hollow block or concrete foundations, dig a trench to, **but not below**, the footing. Then as the trench is refilled, treat the soil at the rate of 4 gallons per 10 linear feet **for each foot of depth**. A trench 3 feet deep would require 12 gallons per 10 linear feet.

3. HERE ARE THE RESULTS YOU MAY EXPECT!

This product, used according to directions, will kill established termites and lay down a chemical barrier to prevent new infestations for a period of five years.

CAUTIONS: Harmful if swallowed, inhaled or absorbed through the skin. Do not breathe spray mist. Avoid contact with skin. Skin contact causes toxic symptoms. Wash face and hands before eating or smoking. Take shower or bath after handling. Change to clean clothing daily.

DO NOT USE, POUR, SPILL OR STORE NEAR HEAT OR OPEN FLAME.

Food utensils such as tablespoons or measuring cups should not be used for food purposes after use with pesticides.

Avoid contamination of feed and foodstuffs.

This product is toxic to fish, birds and other wildlife. Keep out of lakes, streams or ponds. Do not contaminate water by cleaning of equipment, or disposal of wastes. Apply this product only as specified on this label.

Do not reuse container for any purpose. Destroy empty container.

ANTIDOTE: External — In case of skin contact, wash promptly with soap and water.

Internal — If swallowed call a physician immediately.

Buyer assumes all risks of use, storage or handling of this material not in strict accordance with directions given here-with.
