DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Hi-Yield® Vitamin B₁ with Alpha-Naphthalene Acetic Acid is a Vitamin-Hormone like formulation designed to STOP TRANSPLANT SHOCK and promote plant growth. This potent complex gives renewed vigor to small fibrous feeder rootlets that are generally injured when plants are moved from one area to another. Thus, it is beneficial to bedding plants, rooted cuttings, bare-root roses or large trees or shrubs. The frequent use of this product is highly recommended to prevent die-back of any and all newly-transplanted ornamentals. Its purpose is to insure SUCCESS in transplanting. Plant hobbyist and "weekend" gardeners have long used Vitamin B₁ with Alpha-Naphthalene Acetic Acid with enthusiastic success in getting plants off to a "snappy" start. Not for use on plants being grown for sale or other commercial use, commercial seed production, or research purposes.

For transplanting ornamental shrubs and trees mix one tablespoonful of this product into a gallon of water and saturate thoroughly the soil around the plant or plants. For transplanting potting plants, rooted cuttings, or house plants, the mixture should be one teaspoonful per gallon of water. Applications should be made weekly until plants are well established. Subsequent monthly applications are desirable. Remember, Hi-Yield® Vitamin B₁ with Alpha-Naphthalene Acetic Acid is a PLANT STIMULANT, not a fertilizer.

STORAGE AND DISPOSAL

STORAGE: Store in original container. Avoid contamination of feed and foodstuffs. Keep in an area inaccessible to children and pets.

DISPOSAL: If empty: Do not reuse this container. Place in trash or offer for recycling if available. **If partly filled:** Call your local solid waste agency or 1-800-CLEANUP for disposal instructions. Never place unused product down any indoor or outdoor drain.
