Enclosures

**DIRECTIONS**

All wood to be treated should be dry, clean, free from previous finishes and the framing or cutting completed before applying ZPW. All unsound wood should be removed at least 2 feet beyond any visible evidence of decay. Best results can be obtained by soaking the wood for five minutes per inch of wood thickness. When this is not possible at least 2 coats should be applied by brush or low pressure flood spray. The second coat must be applied before the first coat is dry, and all surfaces should be covered with particular attention paid to side and end grains. Fence posts, poles, foundation timbers and heavy wooden members should be free of bark, dry and well-seasoned. The portion to be buried should be soaked 48 hours to be an effective wood preservative. Soak for 24 hours for wood in contact with the ground. Fish nets, rope or twine should be dipped in ZPW to thoroughly saturate the fibers.

**SEMI-TRANSPARENT STAIN:** This product can be mixed with up to 6 oz of tinting color to one gallon ZPW which will produce a water repellent wood preservative semi-transparent stain.
