

## DIRECTIONS

For glassware, dishes, etc.: add 1 ounce of IODINE-SANITIZER to 5 gallons of water in wash sink number one. Rinse in sink number two in clear water. Then sanitize in sink number three using 1 ounce of IODINE-SANITIZER in 5 gallons of water. This will provide 12.5 PPM of available iodine. Dishes and glassware should air dry.

Unlike most other cleanser-sanitizers IODINE-SANITIZER provides its own indicator of germicidal activity. While the brown or amber tint of iodine remains, an IODINE-SANITIZER solution is active. When the color goes, the solution must be replaced.

Public Health Codes require a two minute immersion in the sanitizing solution. Even though IODINE-SANITIZER acts very rapidly Public Health regulations should be followed.

CONTENTS: 1 GALLON

# MARVAL

## IODINE SANITIZER

Is a beverage glass cleaner-sanitizer for bars, taverns, restaurants. Does not leave any visible film on dishes or glassware. Does not affect the head on beer. Does not leave any residual odors or flavor after drying.
