NOTE TO PHYSICIAN

Sodium hypochlorite is corrosive to eyes, skin and mucous membranes with chemical burns (caustic). Treatment is dilution/flushing of site with copious amounts of water with controlled removal of exposure followed by symptomatic and supportive care to maintain life functions. Consideration should be given to careful endoscopy as stomach or esophageal burns, perforation, or strictures may occur. Probable mucosal damage may contraindicate the use of gastric lavage. Careful gastric lavage with endotracheal tube in place should be considered. Observation may be warranted.
