DIRECTIONS FOR USE
GENERAL CLASSIFICATION

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Start feeding Hubbard Roughage 14 ROL Block early in the spring before flies begin to appear, and continue feeding throughout the summer and the fall.

Hubbard Roughage 14 ROL Block may be fed up to slaughter and to lactating dairy cows.

Hubbard Roughage 14 ROL Block prevents the development of horn flies, face flies, house flies and stable flies in the manure of treated cattle but is not effective against existing adult flies. When starting a feeding program during the fly season, it may be necessary to use other control measures to reduce the population of existing adult flies.

Supplementary fly control measures may be needed in areas where cattle rest and loaf, such as shade trees, sheds and barns, to control stable flies which can breed in manure, bedding, spilled feed, vegetable matter and waste in these areas.

In order to achieve optimum fly control, supply Hubbard Roughage 14 ROL Mineral Block as the only source of supplemental salt or mineral and follow good management and sanitation practices.
