

TACK TRAP

Patent Pending

TACK-TRAP is a non drying, non-volatile compound having permanent tack for trapping light-weight insects, such as boll weevils and gypsy moths.

It is colorless and odorless after evaporation of solvent. It does not possess any repellent or attractant properties in itself.

TACK-TRAP is formulated for easy brush-on application under normal field operations, and does not require pre-heating. It is so formulated that it will not flow off vertical trap surfaces, even at temperatures to 125°F; nor be inoperative at temperatures to 35°F.

Efficiency may be impaired by accumulation of surface dirt in high dust areas, and repeated application may be necessary.

May be removed best from skin and clothing with waterless hand cleaners, or light petroleum solvent (paint thinner).

CAUTION:

Harmful if swallowed. Do not reuse container. Destroy when empty.

Keep Out of Reach of Children.

ACTIVE INGREDIENTS	
Polyisobutylene	76.0%
