LONG LASTING - ODORLESS

BIRD-STOP is a clear, colorless compound which birds find tacky and disagreeable underfoot. Effective quality lasts for at least 90 days and is not affected by extreme changes in temperature, from 15°F to over 150°F.

EASY TO APPLY:

Contents apply best when used above 60°F. Remove protective cap, squeeze tube to apply. Keep nozzle close to surface and apply slowly in a $\frac{1}{8}$ " wide continuous ribbon along edges usually grasped by birds when landing. Examples are top edges of gutters, roofs, fences, signs and iron work; both edges of rafters, nesting areas, etc. Wide surfaces, such as window sills and wall tops, will require several parallel ribbons starting $\frac{1}{2}$ " from edges. Allow 1" to 2" between ribbons for sparrows and starlings; 3" for pigeons. BIRD-STOP will adhere to any clean, dry building surface, metal, wood, brick, stone, etc.

Contents of this tube will provide approximately 50 linear feet of protective striping $\frac{1}{8}$ " wide. For areas beyond convenient reach, consult your local pest control operator, window cleaner, or building maintenance operator.

Contaminated surfaces may be cleaned with mineral spirits or petroleum paint thinner.

ACTIVE INGREDIENTS

Polyisobutylene 95.5%

INERT INGREDIENTS

4.5%
