

IMPORTANT DIRECTIONS

SHAKE WELL BEFORE USING!

ROOST-NO-MORE is a gelatin compound sparrow, pigeons and starlings find disagreeable underfoot. Birds prefer to land on something they can grasp rather than a flat surface. Treat only the natural landing places, such as edges of window sills, roof ridges, gutter edges, tops of signs, ornamental copings, and ledges.

TO OPERATE AEROSOL CAN - Shake well before using! Lift protective cap. Invert can and push nozzle to one side. Move can over area to be treated with an even stroke.

PREPARATION OF SURFACE - Remove all nests. Use wire brush to clean surface. On porous material such as stone, use water-proof silicone base material to form a sealer against penetration of surface. Surface must be clean and dry. Do not apply in rainy, damp weather or below freezing temperature.

HOW TO APPLY - Move can with an even stroke SLOWLY which will leave a ribbon of ROOST NO MORE after gases have evaporated. This ribbon to be applied along the top of signs, roof ridges, structural iron, ledges, wall tops, etc., 1/2 inch from the edge of the ledges, sills, etc. Treat wall tops as ledges. Rain gutters need a ribbon along the outer lip and a broken line around the downspout. Birds sometimes over shoot their mark in landing and skid farther in. Additional "lines of defense" should be laid where space requires. For pigeons these ribbons should be three (3) inches apart and for starlings and sparrows two (2) inches apart. If affected areas are beyond safe reach, consult your building cleaner, painter, tuckpointer or roofer.

ROOST-NO-MORE is also available in 10" cartridges.

CAUTION: - Do not puncture or incinerate. Do not store can in sunlight or where temperature is over 120° F.

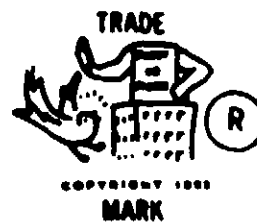

ACTIVE INGREDIENTS:
Polymerized Butenes and Related Alkenes..... 76%
INERT INGREDIENTS: 24%
100%
