

DIRECTIONS

For newly filled pools or at start of each season:

Add 10 oz./10,000 gallons of water (equivalent to 1.0 ppm available chlorine). Test with a reliable chlorine test kit and continue adding in smaller amounts (1 oz./ 10,000 gallons equivalent to 0.1 ppm available chlorine) if necessary until a residual of 0.6 to 1.0 ppm is established as determined by the test kit. Keep the pH at 7.2 to 7.6 at all times as determined by an adequate pH test kit.

Sodium Hypochlorite degrades with age. Store in cool, dark place.

Use Test Kit often and increase dosage as necessary to maintain required level of residual chlorine.

Test Kits available from your pool supply dealer.
