FEDERAL CHEMICAL COMPANY

HOME OFFICE: LOUISVILLE, KENTUCKY 40202

LAWN MASTER CRABGRASS CONTROL is formulated with the highly effective pre-emergence herbicide "DACTHAL"[™] to prevent and avoid the unsightly appearance of crabgrass.

DIRECTIONS FOR USE

LAWN MASTER CRABGRASS CONTROL should be distributed evenly over 2000 sq. ft. of lawn area during the early spring of the year, after the normal spring clean-up to avoid the necessity of raking or disturbing the soil surface after application. Being a pre-emergence compound LAWN MASTER must be applied prior to the germination of crabgrass which can appear any time during or after the end of May. This product will not provide control if applied after crabgrass appears. For best results apply at the rate of 10 lbs. per 1000 sq. ft. of lawn area. (This bag covers 2000 sq. ft.) It is best to use a lawn spreader. When using one of the following spreaders adjust the setting on the number indicated in the table below and apply to the lawn first in one
