2. Other minor label changes

Dear Dr. Bolin:

The Agency is in receipt of your Application(s) for Pesticide Notification under Pesticide Registration Notices (PRN) 2007-4 and 98-10 dated June 30, 2009 for:

EPA Registration 7969-207

REGENT 4SC

The Registration Division (RD) has conducted a review of this request for applicability under PR Notices 2007-4 and 98-10 and finds that the label changes requested falls within the scope of PR Notices 2007-4 and 98-10. The label has been date-stamped "Notification" and will be placed in our records.

Please be reminded that 40 CFR Part 156.140(a)(4) requires that a batch code, lot number, or other code identifying the batch of the pesticide distributed and sold be placed on nonrefillable containers. The code may appear either on the label (and can be added by non-notification/PR Notice 98-10) or durably marked on the container itself.

If you have any questions, please contact me directly at 703-305-6249 or Nicole Williams of my staff at 703-308-5551.

Sincerely,

A handwritten signature in black ink, appearing to be "Linda Arrington".

GENERAL PRECAUTIONS AND INSTRUCTIONS

SPRAY PREPARATION

Remove oil, rust, scale, pesticide residues and foreign matter from sprayer and strainer. Flush with clean water. Use 50 mesh screens or equivalent in spray system. Applicator tanks must be equipped with a sparge tube agitator, unless the alternative agitator designs can adequately cleanse the bottom of the tank and provide sufficient agitation required for product mixing. Pump approximately 10% of the tank capacity per minute back into the tank through the agitator.

To prepare for spraying, fill tank to approximately 1/2 the needed volume of water or liquid fertilizer and start agitation. Open product container(s) and pour contents into tank. Agitate to ensure thorough mixing for a minimum of 2 minutes or until product is thoroughly dispersed. Agitate product mixtures continuously during use. Avoid allowing tank contents to remain without agitation for periods greater than 1 hour. When tank contents have remained without agitation for 1 hour or longer, agitate contents for at least 10 minutes before starting application. Avoid allowing large quantities of product mixtures (greater than 5 gallons) to be stored in a non-agitated tank for extended periods of time, such as 12 hours or greater.

Regent 4 SC can be tank mixed in accordance with the most restrictive of label limitations and precautions.

DO NOT exceed any label dosage rates. This product cannot be mixed with any product whose label contains a prohibition against such mixing.

80911

If tank mixes with other products are to be used, evaluate tank mix compatibility with **Regent® 4 SC insecticide** in a small container before mixing larger quantities in the application tank.

COMPATIBILITY

The full range of compatibilities with **Regent 4 SC** under local conditions is not known. Therefore, it is essential that before using **Regent 4 SC**, the compatibility of the mixture be established. For example: Fill a quart jar 1/2 full of water or liquid fertilizer, then add 2 teaspoons of **Regent 4 SC** and disperse. Add any other pesticides, fertilizers, or tank mixtures and shake thoroughly. **DO NOT USE MIXTURES THAT CURDLE, PRECIPITATE, OR GREASE. FOR BEST RESULTS, SPRAY MIXTURES SHOULD BE USED IMMEDIATELY AFTER MIXING. USE ADEQUATE AGITATION.**

USE RESTRICTIONS

- **DO NOT** apply this product through any kind of irrigation system.
- **DO NOT** harvest within 90 days of application.
- **DO NOT** plant root, leafy or legume vegetables within four months following application.
- **DO NOT** plant wheat or triticale within two months following application.

The mix tank of **Regent 4 SC** plus water or liquid fertilizer must be agitated continuously. After completion of the direct injection in the mixing process, the final volume delivered to the furrow should have a minimum volume of 1.0 gallon of water, liquid fertilizer, or combination of the two per crop acre.

Use the following chart to select the correct rate of **Regent 4 SC** per 1,000 row feet and rate of product per acre for corn.

*Row Spacing (inches)	**Rate/Acre (fluid ounces/acre)	Row Feet/Acre (feet)	Rate/1,000 row feet (fluid ounces/1,000 row feet)

* **DO NOT** apply 0.24 fluid ounces/1,000 row feet on row spacing less than 30 inches.
 ** Adjust rate per 1,000 row feet so that you **DO NOT** apply more than 0.13 lb. ai/acre or 4.16 fluid ounces of **Regent 4 SC** per acre.

100911

USE DIRECTIONS FOR POTATO

Use in potato not permitted in New York State unless otherwise directed by supplemental labeling.

PESTS CONTROLLED AND APPLICATION METHOD

Crop	Pests Controlled	Application Method
Potato	Wireworms	Make one in-furrow application at time of planting only. Banding must be done in-furrow as a 5- to 7-inch wide band. Regent® 4 SC insecticide must be thoroughly incorporated and covered with soil immediately after application. DO NOT use T-banding over the top of a closed furrow.

APPLICATION REQUIREMENTS

Make one in-furrow application at planting time only. **DO NOT** apply this product through any kind of irrigation system.

Dilute **Regent 4 SC** in a minimum of 5.0 gallons of water or liquid fertilizer per acre. If flat-fan nozzles are used for in-furrow application, the nozzles should be aligned with the row to direct the spray into the open furrow.

Regent 4 SC can be directly injected into the suction or pressure line(s) of a liquid spray system provided that the product is uniformly dispersed into the water or liquid fertilizer. Predilution of **Regent 4 SC** in a minimum of 0.5 gallons of water or liquid fertilizer per acre, prior to injection, is necessary to improve metering accuracy.
