Runoff may be hazardous to estuarine and aquatic organisms in water adjacent to treated areas. Care must be taken to avoid runoff. **DO NOT** contaminate water by cleaning equipment or disposal of wastes. **DO NOT** contaminate water when disposing of equipment washwaters.

GENERAL INSTRUCTIONS

For application by injection to soil at the base of pine trees.

USE RESTRICTIONS

Make one application per year. **DO NOT** apply more than 21 fl oz (0.13 lb a)

PTM Insecticide per acre per year.

DO NOT apply this product through any kind of irrigation system.

DO NOT apply within 20 yards (in New York State, **DO NOT** apply within 100 feet or 33 yards) of lakes, reservoirs, rivers, permanent streams, marshes, natural ponds, estuaries, commercial aquaculture facilities or other bodies of water that convey water to these areas. Protection of aquatic areas may be enhanced by maintaining all or a portion of this buffer in vegetative cover.

DO NOT apply to trees raised for pine nuts.

Apply only as a soil injection. **DO NOT** apply to the soil surface.

PREPARING DILUTION FOR APPLICATION

Prior to mixing, remove oil, rust, scale, pesticide residues and foreign matter from application equipment including the strainer. Flush with clean water. Use 50 mesh screens or equivalent in application system.

Fill tank with approximately $\frac{1}{2}$ the needed volume of water and start agitation if available. Pour measured amount of **PTM Insecticide** into tank. Add remaining water needed to make the final dilution.

Small handheld or backpack applicator tanks should be shaken after filling and before each application to ensure that the active ingredient is evenly suspended in the mixture. Tank lids must be sufficiently tight before shaking to avoid spillage.

Applicator tanks too large to manually shake should be equipped with a sparge tube agitator. Alternative agitator designs may be used if they can adequately cleanse the bottom of the tank and provide sufficient agitation required for product mixing. Approximately 10% of the tank capacity should be pumped per minute back into the tank through the agitator. Agitate to ensure thorough mixing. Periodic agitation of the final dilution is important to keep the active ingredient evenly suspended in the mixture.

PTM Insecticide can be tank mixed in accordance with the most restrictive of label limitations and precautions. No label dosage rates should be exceeded. This product cannot be mixed with any product whose label contains a prohibition against such mixing. If tank mixes with other products are to be used, evaluate tank mix compatibility with **PTM Insecticide** in a small container before mixing larger quantities in the application tank.

PESTS CONTROLLED

Nantucket pine tip moth (*Rhyacionia frustrana*) and pine bark aphids (*Cinara* spp.)

APPLICATION

Apply a dilution of water and 21 fluid ounces **PTM Insecticide** per acre at the time of planting or soon after planting. Spot treat by injecting an amount of dilution at least 3 inches below ground into the rooting zone of each pine seedling. Divide the total number of target trees to be treated per acre by 21 fl oz to obtain the amount of **PTM Insecticide** dilution to apply per tree. Dilute the required amount of fipronil with water to apply between 0.1 and 1.0 fl oz of total dilution per tree.

Examples of Application Volumes Based on Number of Trees Planted per Acre Use Directions
