

**DIRECTIONS FOR USE**

**Initial Dose:** 1 gallon concentrate to 50,000 gallons of water in a freshly filled pool, or where algae are not visible.

**Maintenance Dose:** 1 quart to 50,000 gallons of water, at least once every 7 days. If high temperatures are encountered, or pool has unusually heavy use, add maintenance dose more frequently.

**For makeup water:** add 1 quart for each 10,000 gallons of fresh makeup water added per week.

When swimming season is over, and if water is left in pool, add 1 gallon of concentrate for each 50,000 gallons of water left in pool. This will provide a measure of algae growth control during off-season. This treatment will also help the servicing of the pool the following season.

**For cleaning poolside surfaces**

After cleaning surfaces with pool brush, make cleaner use 1/2 oz. of this concentrate to 4 gallons of water for sanitizing poolside surfaces. This 1/2 oz. per gallon of water will sanitize surfaces. These treatments are effective by killing algae also accumulated.
