

[8169-1]

**DIRECTIONS:** When properly installed — one Mist dispensing unit containing a can of Hunter's Mist Insect Killer is usually sufficient to treat 6000 cubic feet of air space. The Mist dispenser will release 100 mg. of concentrated material every 15 minutes. Its effectiveness on flying insects will usually be noticeable within one hour after the machine has been activated. Two hours of continuous operation will generally suspend enough insecticide in the air to reduce the number of flying insects present on the premises.

**MAXIMUM INSECT CONTROL IS MAINTAINED WHEN THE MIST DISPENSING UNIT IS ALLOWED TO RUN CONTINUOUSLY FOR 24 HOURS PER DAY.**

Such factors as temperature, humidity, shape of space to be treated and rate of air change have an important bearing on insect activity and the maintenance of effective insect control. Under normal circumstances one properly placed mist dispensing machine will be able to effectively treat an average 6000 cubic foot enclosure but adjustments should be made to allow for unusual circumstances. These adjustments depend on the conditions under which the unit is to be used.

One can of Hunter's Mist Insect Killer contains approximately 2700 "shots". This is sufficient to operate for a total of 672 hours or 28 days on a 24 hour per day basis. It is suggested that a new container be installed every 28 days when operating on a 24 hour per day basis.

## Magic Mist Brand Flying Insect Killer

**FLIES — GNATS — MOSQUITOES**
