

When used as directed, this product is effective as a pool water disinfecting agent.

The filter system should be backwashed or properly cleaned and the pH adjusted between 7.2 and 7.6.

It is recommended that the pool be stabilized with 50-60 ppm trihydroxy triazine to nullify the dissipation effect of sunlight on chlorine. When using this product, both chlorine and trihydroxy triazine are being added to the water; however, it is necessary to initially stabilize pools with 50-60 ppm of trihydroxy triazine to effectively maintain the desired concentration of stabilizer.

DIRECTIONS

Use 5 ounces of Pool Chlorine Concentrate per 10,000 gallons of water as an initial treatment. Repeat daily until a residual of 1.0 to 2.0 ppm of available chlorine is established. Maintain this level by additions of 2 to 3 ounces of Pool Chlorine Concentrate per 10,000 gallons of water daily or as needed as determined by use of test kit.

The use of a quaternary ammonium type algicide will complement this total program of swimming pool maintenance.

If a need for superchlorination is indicated, use 1 pound of this concentrate per 10,000 gallons of water. Add preferably at night or when the pool is not being used. Resume swimming activity when available chlorine falls below 2 ppm.

POISON

ANTIDOTE: Call a physician.

EXTERNAL: For skin and eyes, immediately flood with large amounts of water. For eyes, get immediate medical attention.

INTERNAL: Take large amounts of milk, followed by olive oil or cooking oil.

DANGER: Strong oxidizing material. Contact with heat, mois-

ture or foreign materials may result in fire. Will burn with the evolution of irritating and hazardous gases.

Store in a cool dry place. Keep away from heat or open flame. Avoid contact with skin and eyes. Avoid breathing dust. Harmful if swallowed. **DO NOT TAKE INTERNALLY!**

Keep container closed when not in use. Protect from moisture contamination. Do not reuse empty container. Destroy it by burying with waste or burning. Stay away from smoke or fumes.
