EAR-RITE is an aid in treating acute bacterial conditions in the outer ear canal, often associated with ear mite infestation. EAR-RITE kills ear mites and aids in removal of ear wax.

DIRECTIONS

CLEANING EARS:

Clean ears twice a month as an aid in reducing probability of ear mite infestation and wax accumulation.

Insert 10 drops of EAR-RITE into each ear. Let soak in for a few minutes. Swab thoroughly with cotton.

AS A MEDICATION:

For redness, swelling, discharge or head shaking. Clean ears by inserting 10 drops into each ear and allow to soak in for a few minutes. Swab thoroughly with cotton. Insert 10 drops into each ear or enough to coat entire surface and allow to remain. Repeat daily until condition is completely corrected.
