**READ ENTIRE LABEL BEFORE EACH USE  
USE ONLY ON CATS**

**PRECAUTIONARY STATEMENTS  
HAZARD TO HUMANS AND DOMESTIC ANIMALS**

**CAUTION:** This collar is intended for use as an insecticide generator and is not to be taken internally by man or animals. Not intended for use by humans. Do not allow children to play with this collar. Wash hands with soap and water after handling collar. Do not use on cats under 12 weeks of age. Consult a veterinarian before using this product on debilitated, aged, pregnant, nursing or medicated animals.

Some cats may be sensitive to this collar. Remove at first sign of irritation or adverse reaction (muscular tremor, salivation, vomiting and/or diarrhea). Sensitivities may occur after using ANY pesticide product for pets. If signs of sensitivity occur, bathe your pet with mild soap and rinse with large amounts of water. If signs continue, consult a veterinarian immediately.

The insecticide in this collar is a cholinesterase inhibitor. Do not use this product on animals simultaneously or within 30 days before or after treatment with or exposure to cholinesterase-inhibiting drugs, pesticides or chemicals. However, flea and tick collars may be immediately replaced.

**FIRST AID**

Note to Physicians and Veterinarians: Atropine only by injection is antidotal. Use only if symptoms of cholinesterase inhibition are present.

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

The collar contains one of the longest-lasting flea and tick killers available for use on cats. It will reach its maximum effectiveness within 2 to 3 days after placing it on the cat and will continue to protect your cat against fleas up to 11 months and ticks up to 6 months. Ticks, it should be noted, are only occasional and usually temporary pests of cats.

This collar is also designed to stretch. This helps the cat to free itself if the collar gets snagged on a fixed object.

Place collar around cat's neck, buckle and adjust for proper fit. Cut off and dispose of excess length. The collar must be worn loosely so that two fingers may be placed between collar and cat's neck. If collar is worn too tightly, it may produce neck irritation. Fleas and ticks present in the cat's environment that may reappear on your pet will be killed by action of this collar. The collar's effectiveness is not diminished by normal wetting such as rainfall; however, it is suggested that the collar be removed before bathing.
