

GENERAL INFORMATION

This product is made specifically for use on valued race horses, fine show animals and by the pleasure riders who want an effective, long lasting fly protection for their animals. It has been formulated to give protection against horse, face, stable, house, horn, and deer flies, mosquitoes and gnats. When used as directed, this product will give ample protection with a single daily application, yet won't burn, blister or discolor the hair. In addition to its repellent qualities, this product contains a highly effective insecticide which kills on contact those few insects which are not repelled from the protected animal.

DIRECTIONS FOR USE

Amount of repellent needed will vary with air temperature, insect population, and cleanliness of animal. C-V-R-L recommends average of 2 ounces in summer months, 1 ounce in winter months per adult animal per 24 hours; proportionately less for smaller animals. To insure that the above amounts reach the animal, it is recommended that the cloth being used to apply the repellent be moistened before a measured amount is applied to the animal. The cloth can be used many times and will retain its moisture if kept in an airtight container between periods of daily use.

The most effective application is obtained by brushing animal to remove loose dirt, dust and debris — then by briskly rubbing turkish toweling, saturated (but not soaking) with repellent, against growth of hair giving special attention to shanks, legs, shoulders, neck and tail followed by grooming with brush. Repellent may be applied until hair is moist but do not wet hide. Application during the morning hours (8. to 10 a.m.) will give the greatest protection for the maximum time of repellent effectiveness. Continuous daily treatments give a build-up in repellent effectiveness on the animal and therefore the amount of application may be reduced as control is noted.

CAUTION

Do not use, pour or store near heat or open flame or while smoking. Avoid over-application of product which will result in wetting animals' hides. Store in cool place, out of direct sunlight, and OUT OF REACH OF CHILDREN. Harmful if swallowed. Do not reuse empty container. Destroy it by perforating or crushing. Bury or discard in a safe place away from water supplies.

NOTE: After long standing mix contents by inverting several times.

GENERAL INFORMATION

Specifically for use on valued race horses, fine show and pleasure riders who want an effective, long lasting fly repellent. It has been formulated to give protection against house, horn, and deer flies, mosquitoes and gnats. When used product will give ample protection with a single daily application. Blister or discolor the hair. In addition to its repellent effect contains a highly effective insecticide which kills on insects which are not repelled from the protected animal.

DIRECTIONS FOR USE

Amount needed will vary with air temperature, insect population, animal. C-V-R-L recommends average of 2 ounces in summer in winter months per adult animal per 24 hours, proportionally for other animals. To insure that the above amounts reach the animal it is recommended that the cloth being used to apply the repellent be measured amount is applied to the animal. The cloth can be reused and will retain its moisture if kept in an airtight container for daily use.

Best application is obtained by brushing animal to remove loose hair — then by briskly rubbing turkish toweling, saturated (but not dripping) with repellent, against growth of hair giving special attention to ears, neck and tail followed by grooming with brush. Repeat until hair is moist but do not wet hide. Application during morning (8 to 10 a.m.) will give the greatest protection for the maximum effectiveness. Continuous daily treatments give a build-up of effectiveness on the animal and therefore the amount of application as control is noted.

CAUTION

Do not store near heat or open flame or while smoking. Avoid contact with product which will result in wetting animals' hides. Store in direct sunlight, and OUT OF REACH OF CHILDREN. Harmful if not reuse empty container. Destroy it by perforating or burning in a safe place away from water supplies.

Shaking mix contents by inverting several times.
