

Dry Chlorinating Sanitizer . . . Formula FS-101

X
The FS-101 formulation is an organic chlorinating agent in powdered form formulated to a strength of 33% available chlorine.

FS-101 has a high degree of stability in storage and during the use of the product. Additionally FS-101 contains super phosphates for mineral sequestering.

FS-101 is completely soluble in cold water and it will dissolve relatively fast.

The fact that FS-101 contains super phosphates enables its use in the hardest waters.

In water supplies that are extremely heavy in iron there may be a slight reddening of the FS-101 solution but not to a degree to cause discoloration of equipment.

X
The cost per dosage of FS-101 is only slightly higher than that of the Sodium Hypochlorite but with all the other advantages it is recommended as the number one IBA Chlorinating Sanitizer.
