EASTERN READY TO USE RAT AND MOUSE CONTROL CHEMICAL

Active Ingredient:	
- Pivalyl - 1, 3 - Indandione	0.025 %
Inert Ingredients	99.975 %
Total	100.000 %

DIRECTIONS

This is a ready to use rodenticide. Baits should be placed in locations frequented by rats and mice and preferably where they are known to feed.

RATS - Each bait placement should be 1/2 to 1 pound.

MICE - Each bait placement should be 1 tablespoonful and placements made at 8 to 10 foot intervals.

Baits must be protected from children, pets and livestock by bait boxes, cages or other suitable means. Baiting should be maintained continuously as long as any evidence of feeding is observed, a minimum of 10 to 15 days. Average kill time is from 6 to 14 days, but some feeding may continue up to the fourth week. Where infestations are likely, permanent bait stations should be used, and bait placed in them as often as necessary. Baits should be examined regularly and replenished before completely eaten. This product is resistant to insect infestation, less susceptible to mold and highly acceptable to rats and mice. However, should baits become sour, moldy or infested with insects, they must be replaced with fresh baits.

CAUTION

KEEP OUT OF REACH OF CHILDREN

CAUTION

Protect children, pets and animals from bait. If swallowed by humans, domestic animals or pets, this material may reduce the clotting ability of the blood and cause bleeding. In such case, treatment is surgical administration of vitamin K combined with blood transfusions are indicated as in the case of hemorrhage caused by overdoses of phytylhydroquinone.
