DIRECTIONS FOR USE

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING.

Dilute one (1) packet of Sealbrite Benomyl in 55 gallons of PacRite Citrus Waxes to yield 1200 ppm of 50% benomyl. When fruit is more susceptible and/or when excessive inoculum levels are present, use a 1 packet of Sealbrite Benomyl in 27.5 gallons of wax to yield 2400 ppm of 50% benomyl. For control of sporulation (*Penicillium* spp.) use 1 packet per 13.75 gallons. Maintain constant agitation. Rate of application: One (1) gallon per 8-10,000 pounds of fruit.

If treatment is not effective following use of the product as recommended, a resistant strain of the fungus may be present. If treatment is ineffective due to the presence of a benomyl resistant strain, then neither benomyl nor any other benzimidazole or thiophanate type fungicide will effectively control that disease; consideration should be given to prompt use of other types of suitable fungicides.
