

READ THESE ENTIRE DIRECTIONS AND WARRANTY OF SALE. USE STRICTLY IN ACCORDANCE WITH LABEL CAUTIONS, WARNINGS AND DIRECTIONS.

Agway TOTAL WEED KILLER is recommended for use where it is desirable to retard and to prevent regrowth of all vegetation throughout the entire growing season. TOTAL WEED KILLER works two ways:

Kills all young weeds and grasses on contact. Deposits a chemical residue on the soil which prevents annual weeds and grass seeds from germinating during the entire growing season.

APPLICATION: Use undiluted or mix with water and apply with a sprayer or sprinkling can. For best results, apply early spring before weeds germinate. If weeds have germinated, apply before weeds are 2 to 4 inches tall and growing actively. Contact activity will be apparent on weeds in a few days but final kill by root penetration may take 2 to 3 weeks. During seasons when rainfall is unusually high a second application may be necessary for residual action.

RATES: For Annual weed and grass control on Walks, Driveways, Patios and Tennis Courts:

SPRAYER APPLICATION: Spray undiluted 1 quart per 120 sq. ft. (10 x 12) or 1 gallon per 500 sq. ft. (10 x 50) of surface to be treated. Spray when air is calm. Use lowest possible pressure and largest nozzle opening to produce large droplets to minimize spray drift.

SPRINKLING OR WATER CAN APPLICATION: To insure even coverage, dilute one quart of TOTAL WEED KILLER to one gallon or more of water and apply to 120 sq. ft. or one gallon of TOTAL WEED KILLER to four or more gallons of water to 500 sq. ft.

For areas such as Fire Lanes, Fence Rows and for areas where heavy grass and weed growth is present, the use of additional water for thorough wetting of all foliage will insure best results. Where vegetation is more than 6 inches high, mow or cut before applying the material. A second application in 2 to 3 months may be necessary to control deep rooted perennial weeds such as Milkweed and Canada Thistle.

SPOT TREATMENT. Use undiluted for treating vegetation as soon as noticed on Walks, Driveways and other areas. Apply as a coarse wetting spray.

CLEANING SPRAYERS AND SPRINKLING CANS: Wash immediately and thoroughly with a household detergent and water. Make a second rinse of clean water to insure complete removal of TOTAL WEED KILLER from equipment that is to be used for applying other pesticides.
