GENERAL INFORMATION

Apply AGWAY SEVIN Garden Dust when insects first appear, preferably before damage from feeding occurs. Repeat at 7 to 10 day intervals as necessary. Apply with conventional dusting equipment. Thorough coverage to top and underside of leaves is necessary. Avoid using during flowering and pollination period. SEVIN is toxic to honey bees. Do not dust too heavily or crop injury may result to tender foliage in the presence of rain or high humidity following dusting.

This product does not control mites. Where mites are a problem, use a suitable miticide.

Wearing household latex or rubber gloves, use a dust applicator such as a shaker can, dust gun, puffer or other bulbous duster, rotary duster or other appropriate duster as available. Dust lightly to cover both upper and lower leaf surfaces with a thin, even film of dust.

Apply when air is calm to avoid drift and contact with eyes and skin.

Start applying at the farthest corner of the treatment area and work backward to avoid contact with dusted surfaces. Allow dust to settle in treated areas before reentering.

For plants above chest height, consider using a liquid carbaryl product.

Do not repeat application more than once a week.

Vegetables

ASPARAGUS: For control of asparagus beetle and tarnished plant bug on seedlings and spears, apply ½ to ¾ lbs. per 1,000 sq.ft. when insects appear and repeat as needed, but not more often than once every three days. Do not apply within 1 day of harvest.

For insects attacking silks and ears, apply at 2 to 3 day intervals, starting when first silks appear and continuing until silks begin to dry. Three or more applications may be required depending on severity of infestation. Timing and good coverage are absolutely essential for effective control. May be applied up to day of harvest on corn.
