Agway Greenlawn Plus 21-5-7 Fertilizer with Diazinon® Insecticide rejuvenates starved and insect infested lawn by:

1) providing a controlled feeding fertilizer which gives a thick green lawn, and

- 2) controlling the following insect pests which feed on lawns:
- white grubs (larvae of Japanese beetle, European Chafer, Southern Chafer)
 - Phyllophaga (May or June beetle)
 - Sod webworm (lawn moth)
 - Armyworms
 - Bermuda mites
 - Billbugs
 - Chiggers
 - Chinch bugs
 - Clover mites
 - Crickets
 - Cutworms
 - Earwigs
 - Fleas
 - Leafhoppers
 - Ticks

HOW TO USE:

1. Apply uniformly 2.25 kg/100 sq. meters (4.6 lbs./1,000 sq. ft.) when insect activity or damage (chewed or browned leaves) are first observed in the lawn. For grubs, the most likely period is from late July through early October; the next most likely period is spring.
2. Apply when lawn is dry. The contents of this bag will treat 465 sq. meters (5,000 sq. ft.)
3. Water lawn after application to wash granules from the lawn foliage. If treatment is for grubs, water thoroughly so that active ingredient will be washed into the root zone.
4. Make a repeat application of insecticide (with or without fertilizer) if there are signs of renewed insect activity. (Normally, one application will give effective control for approximately 6 weeks).

Treat entire lawn; not just insect damaged areas. Do not allow traffic on lawn after application until granules are watered off lawn foliage and lawn has dried.
