

Corrosive Liquid, N.D.I.

Directions:
 Mix Preservative
 Mix with other blends of acids. TENOX IBP-2 Grain Preservative is corrosive. Bins should be protected by lining with non-acid plastic sheeting before filling.
 Application
 TENOX IBP-2 Grain Preservative is suggested for application as directed below immediately after harvest to prevent fungal growth in stored corn, milo, barley, wheat, and oats.

Pounds per ton of grain with the following respective percent moisture contents

Moisture Content (%)	10	15	20	22	24	25	26	28	30	32	34	36
Pounds of TENOX IBP-2 Grain Preservative	11	13	15	17	19	21	23	25	27	29	31	

[Convert to "fluid oz. per 100 lbs. of grain" by use of the formula: (lbs. product per ton grain) x 0.79 = (fl. oz. product per cent. grain)]
 Apply undiluted, by use of low pressure spray nozzles achieving uniform coverage, as grain passes through applicator. Stop grain flow immediately in event of spray failure or nozzle plugging. Concentrations of untreated grain may develop fungal growth which may spread and spoil all grain in the bin. DO NOT APPLY TO SEED GRAIN since application will reduce grain to Sample Grade and reduce germination. Increasing the suggested rate of application in the Table by 25% for the top 10% of the grain placed in each storage bin will provide additional protection against the effect of normal moisture migration in the grain during storage.
