WHERE, WHEN AND HOW TO APPLY

Apply STA-GREEN Crabgrass Preventer to established lawns in the spring before germination of annual weeds. Be sure the entire package (20 lbs.) is applied evenly over 5,000 sq. ft. of lawn area.
Use a good lawn spreader and apply evenly over the turf without skips or misses. A more uniform application can be made by spreading half the required amount of product over the areas to be treated and then applying the remaining half at right angles of crosswise.

RESEEDING

Chemicals which effectively control annual weed seeds may also affect new desirable turfgrass seedlings. Reseeding should be delayed for at least 6 weeks after application. When reseeding, it is necessary that proper moisture be maintained until grass seedlings are established. To insure satisfactory reseeding results after using this product, the amount of seed used should be increased.

PRECAUTIONS

Do not apply in the spring to turfgrass planted the previous fall. Do not apply to Bentgrass or Dichondra. Do not apply to newly sprigged areas of Bermudagrass, St. Augustinegrass, or Centipedegrass until these turfs are well established. If verticutting is done, do not apply for 2 to 3 weeks. Do not let livestock graze treated areas. Do not feed forage from treated areas to livestock.
