DIRECTIONS FOR USE

ProTeck-Plus is a preemergence herbicide and lawn food which should be applied directly to established turf for the control of Smooth Crabgrass, Hairy Crabgrass, Goosegrass (Silver Crabgrass), Watergrass (Barnyardgrass), Yellow and Green Foxtail, and Annual Bluegrass (*Poa annua*).

It controls annual grass weeds by killing their seeds as they germinate. It does not control established weeds. When it is applied as directed the following established grasses are tolerant to Balan: Perennial Bluegrasses, Perennial Ryegrass, Centipedegrass, Fescue, Zoysiagrass, Bermudagrass, St. Augustinegrass and Bahiagrass.

Apply to turf before the germination of annual grass weeds. Do not reseed within 42 days after application.
