

 LURE N KILL®
JAPANESE BEETLE

LURE N KILL®

**JAPANESE BEETLE
COMPLETE TRAP & BAIT PACKAGE**

PROTECTS YOUR YARD!
LASTS THE ENTIRE SEASON!
TRAPS OVER A 5,000 SQ. FT. AREA!

Step 4

HANGING THE TRAP: Insert about 3 to 4 inches of the hang tie through the holes in the top part of the vane assembly. Tightly twist the tie to secure the trap in place (Fig. 5). Hang the trap by attaching the long end of the hang tie to a post or stake as shown in Fig. 6. The bottom of the bag should be at least 2 feet above the ground and the trap free to move in the wind without hitting any obstruction. Hang the trap where small children cannot reach it.

Step 5

USING THE TRAP: To intercept beetles heading toward the trap, place the stake with the trap about 30 feet downwind from foliage. Do not place the trap near or in the foliage to avoid attracting beetles to the plant. For maximum effectiveness, use one trap per 1/8 acre. Most Japanese beetles are active and flying during sunny days with temperatures between 70 - 95F and from mid-morning through mid-afternoon. Check the bag periodically. Replace it when the lower portion is filled with beetles, or every five days to reduce the possibility of other beetles being repelled by the odor of the dead beetles.

BEETLE (BAG) DISPOSAL: Knot the top funnel portion of filled bag before disposing of it in a trash receptacle. Generally, beetles trapped in the bag will die after several hours in the heat and sun. To make sure that beetles are dead, leave sealed bags in the sun to kill trapped insects before disposal.

LURE DISPOSAL: Wrap used lures and put in trash receptacle for collection.

Trap Assembly and Homeowner Guide

LURE N KILL®
JAPANESE BEETLE

LURE N KILL JAPANESE BEETLE TRAP COMPONENTS:

INTERLOCKING VANES:

Make the trap quick and easy to assemble.

LURES:

Use controlled release dispensers of japonilure, the powerful Japanese beetle sex pheromone (attractant), and the three-component floral lure to attract both male and female beetles throughout the entire beetle season.

BEETLE DISPOSAL BAG:

Makes disposal of dead beetles easy to do.

Replacement **LURE N KILL Japanese Beetle Bait Packs** and **Disposal Bags** are available from your **LURE N KILL Japanese Beetle Trap** retailer.

This **LURE N KILL Complete Japanese Beetle Trap & Bait Package** consists of a trap, a dual sex lure and floral (food) lure system which attracts two to five times more Japanese beetles than traps with only a single lure. The lures combine to draw male and female Japanese beetles into a trap...and away from valuable ornamentals, fruit trees, vegetables, flowers and shrubs. This product contains no killing agent to damage the environment and will not attract animals, birds or beneficial insects. Because of the unique HERCON controlled release system, both japonilure sex pheromone and floral attractant dispensers are designed to last for the entire trapping season.

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals.

CAUTION: Do not open protective pouches until ready to use. Avoid contact with skin and eyes. Wash hands thoroughly with soap and water after handling. If irritation persists, seek medical attention.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Before using lures, read enclosed directions for Japanese beetle trap assembly. Use one sex lure and one floral (food) lure for each Japanese beetle trap. Apply the lures to the top part, preferably the vane, of the Japanese beetle trap.

REPLACEMENT

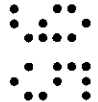

Under ordinary weather conditions, both sex and floral (food) lures should be effective for about 12 weeks. Replace the food lure after this period, or when its floral aroma is no longer noticeable.

STORAGE AND DISPOSAL

Storage: Store in a cool dry place until used. Do not contaminate water, food or feed by storage or disposal. **Disposal:** Do not reuse empty pouches. Wrap used lures before disposing in trash.

NOTICE: HERCON ENVIRONMENTAL makes no warranty, express or implied, for any particular purposes concerning this product, other than those which are contained on this label. HERCON ENVIRONMENTAL will not accept liability for damage or injury resulting from misuse.

TRAP ASSEMBLY DIRECTIONS

Tips on How to Get the Most of Your LURE N KILL Japanese Beetle Trap

Step 1

Set the omnidirectional trap by sliding the vanes together so slots interlock (Fig. 1).

Step 2

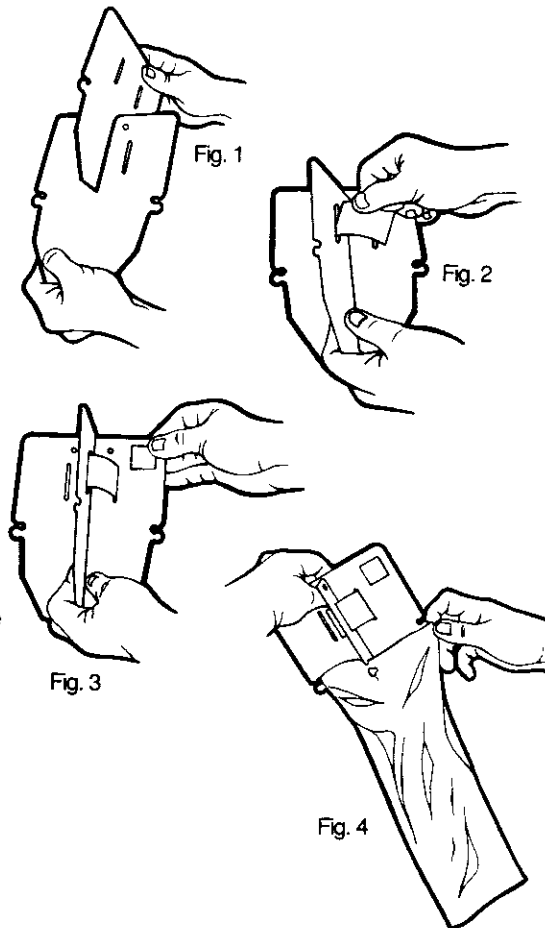

ATTACHING THE FLORAL (FOOD) LURE: Remove lure from its protective pouch. Thread lure through the slots of the two vanes, gently pushing down to lock floral lure dispenser in place (Fig. 2).

ATTACHING THE SEX LURE: Remove lure from its protective pouch. Peel off backing paper covering sticky side of sex lure. Attach sex lure by pressing the sticky side against the yellow vane surface (Fig. 3).

ATTACHING THE COMBO PACK: The sex lure and floral lure may also come packaged as a "combo pack" which is a pouch with two separate compartments. To activate the lures in the combo pack, simply peel away the plastic layer which covers the "windows" of the sex lure and floral lure compartments. Next, peel off the backing paper covering the sticky side of the pouch; press this sticky side against one side of the vane. For traps with smaller vanes, fold the combo pack and press the sticky side against both sides of the vane. **DO NOT REMOVE LURES FROM THE COMBO PACK.**

Step 3

BAG ATTACHMENT: Attach one disposal bag onto the yellow vane assembly. Slip the four small slits on the open end of the bag onto the hooks on the vanes. Be careful not to tear or stretch the slits on the disposal bag (Fig. 4).
