CRABGRASS KILLER

4-4-0

CRABGRASS KILLER herbicide is effective against crabgrass, annual weeds, and other annual weeds as they germinate but not after they have rooted. To be effective, this CRABGRASS KILLER must be applied before weed seed germination in early spring. This usually coincides with the time when Forsythia blossoms start to fall. A single spring application should suffice for most geographic locations. The CRABGRASS KILLER is safe and effective for use on established bluegrass and fescue. The application on a calm day to avoid drift.

QUANTIFIED ANALYSIS
 Total Nitrogen (N)..... 4.00%

DIRECTIONS FOR USE ON ESTABLISHED LAWNS WHEN TO APPLY

This CRABGRASS KILLER kills crabgrass and other annual weeds as they germinate but not after they have rooted. To be effective, this CRABGRASS KILLER must be applied before weed seed germination in early spring. This usually coincides with the time when Forsythia blossoms start to fall. A single spring application should suffice for most geographic locations. The CRABGRASS KILLER is safe and effective for use on established bluegrass and fescue. The application on a calm day to avoid drift.

HOW MUCH TO APPLY

Determine how much lawn is to be covered in square feet. Apply contents of this container evenly to 2,500 sq. ft. (an acre is 43,560 sq. ft.) Use any lawn spreader in good condition. Do not spread over larger area than indicated as such an application will give results.

HOW TO APPLY ON ESTABLISHED LAWNS

Before making application, mow lawn to remove excess grass. For more uniform application, in order to obtain best results, this CRABGRASS KILLER should be evenly applied to lawn as follows. Do not take the lawn or disturb it after application. Water lawn after application.
