Granular Algaecide Concentrate is for use against algae attached to pool bottom or horizontal surfaces. For floating algae or those on side walls try liquid E-Z Clor Algaecide.

INSTRUCTIONS FOR USE

1. Using a suitable test kit, check total alkalinity and pH of pool water. Total alkalinity should be at least 80 ppm, and pH 7.4-7.8. Add acid or soda ash as necessary to obtain correct reading.
2. Brush algae spots with a stiff bristle or wire algae brush.
3. Turn off pump and filter and allow water to settle. Filter should be off for 2-4 hours during treatment.
4. Broadcast Granular Algaecide Concentrate over affected areas. The dosage is 1 to 1½ ounces per 1,000 gallons pool water.
5. After 2-4 hours, brush the affected areas again, and the algae should come loose. If any stubborn spots remain, repeat the treatment on those areas.
6. After treatment is complete and all granules are dissolved, check the pH and chlorine readings. Pool water should be maintained at pH 7.2-7.8, and chlorine at 1.0-1.5 ppm. Do not swim in water above 2.0 ppm chlorine. Give a shock dose, at the above rates whenever algae first becomes visible.

Note: Since Granular Algaecide Concentrate is a strong oxidizing and bleaching agent, It is **NOT RECOMMENDED FOR PAINTED OR VINYL LINER POOLS.**
