LABEL PANEL #1

DIRECTIONS:

C-H Formula #9 Bug Killer is especially designed for C-H Electronic Commercial dispensers. One unit for each 6,000 cubic feet of space to be treated is recommended. A specific amount of concentrated insecticide is automatically released every 15 minutes through the periodic activation of the C-H Electronic Commercial dispensers 100 mg metered chamber. After two hours of operation, enough insecticide is suspended in the air to kill a porportion of the flies, gnats or mosquitoes present, thereby greatly reducing their numbers. Effectiveness of C-H Formula #9 Bug Killer will be noticed within one hour after the C-H Commercial Dispenser has been activated. If less than 24 hours of insect control is required, the C-H Electronic Commercial dispenser should be started one hour ~~before~~ before control is required and allowed to continue for one hour after control is no longer necessary.

The rate of air change, shape of space to be treated, temperature, humidity, and other conditions affect insect activity. Although one C-H Electronic Commercial Dispenser per each 6,000 cubic feet of space may be considered as average, adjustments should be made if necessary, depending upon the conditions under which the units are to be used. Large drafts of forced ventilation may reduce or eliminate the insecticidal efficacy of these installations.

The 12 ounce can of C-H Formula #9 Bug Killer contains approximately 2000 "shots" and will operate at 15 minute intervals for a total of 825 hours or 34 days on a continuous 24 hour basis, or 68 days on a 12 hour basis. If operated on a 24 hours basis, containers should be replaced once a month. If on a 12 hour basis, containers should be replaced every two months. To replace aerosol container, lift lid and snap aerosol container mounting cup and close lid and your C-H Electronic Commercial Dispenser will be ready to operate.
