DIRECTIONS FOR USE

This is a concentrate. Add 1/2 cup of water to 1 quart of water. DO NOT use out of doors. Read carefully instructions attached here.

Spray infested surfaces only until wet.

ROACHES, ANTS, WATERBUGS, SILVER FISH, SPIDERS, CRICKETS, EARWIGS

Spray heavily into all cracks, around baseboards and other places where these insects hide. Also spray until wet surfaces behind and beneath cabinets, refrigerators, sinks, stoves, and other appliances. Spray other localized areas infested with these pests. Repeat treatment as required.

CARPET BEETLES

Make localized application to areas of the floor or baseboard. Spray directly into cracks and under carpets where insects may be found. Treat crevices, cracks, closets and infested areas of shelving. Repeat as necessary.

BROWN DOG TICKS

Thoroughly spray infested area around baseboards, window and door frames, wall cracks, sleeping quarters of household pets and localized areas of floors and floor coverings. Applications should be repeated as infestation warrant and as reinfestations occur. Fresh bedding should be placed in animal quarters following treatment. Do not treat animals with this formulation.

FLIES, MOSQUITOES, WASPS AND FLYING MOTHS OUTDOORS

For outdoor use only as an aid in reducing annoyance from these insects. Spray outside surfaces of screens, doors, window frames or wherever these insects may enter the house. Also treat surfaces around light fixtures on porches, in garages, and other places where these insects alight or congregate. Repeat as necessary.

FLEAS, CHIGGERS, ANTS AND BROWN DOG TICKS OUTDOORS

For treatment of localized infestations of these insects in outdoor areas where there are no pets, brushy non-crop areas, spray liberally and thoroughly. For ant infestations, use and runways. Repeat application if infestations warrant and as necessary.

NOTE: Do not re-apply to surfaces until spray is dry. Do not re-apply to that has been sprayed.

Do not be alarmed if you see insects in the first few days after you spray. Super Rid-A-Bug has special chemicals that draw out insects to expose them to its killing power.
