#### FEEDING DIRECTIONS

1. Feed 1 ounce of VITAZINE (Bar Fly, Pasture Supplement) per day for every 1000 lbs. of body weight. Be sure drinking water is available. Locate the supplement near the animals water, or in a trough in the area. Keep plenty of VITAZINE (Bar Fly, "Fourteen" Pasture Supplement) available for cattle in the feedlot area, feed at the rate of 1 ounce per 1000 lbs. of body weight.

2. Do not feed any other salt or mineral. VITAZINE (Bar Fly, "Fourteen" Pasture Supplement) contains all of the additional salt and mineral required by cattle, when fed at the proper rate.

3. VITAZINE (Bar Fly, "Fourteen" Pasture Supplement) prevents the breeding of horn flies and face flies in the manure of cattle, but does not affect the existing horn fly population. To reduce the population of horn flies, use a horn fly repellent.

4. The active ingredients of VITAZINE (Bar Fly, "Fourteen" Pasture Supplement) have been tested against the horn fly, and found to be effective against the horn fly. The repellent effect of the active ingredients of VITAZINE (Bar Fly, "Fourteen" Pasture Supplement) is not permanent.
