HOW TO USE ALGAECIDE

Initial dose should be applied to a clean pool before Algae are visible. For best results, start using algaecide with first filling of pool. If algae growth is visible and pool must be kept in service without interruption, allow initial dose to work overnight. Remove withered algae with pool vacuum cleaner. Then repeat initial dose. Thereafter, renewal doses will keep water free of visible algae. Algaecide should be added directly to the pool water without prior mixing with other chemicals.

Do not reuse empty container. Destroy it by perforating or crushing. Bury or discard in a safe place.
