

KOMEEN™ BACK LABEL

## KOMEEN AQUATIC HERBICIDE

### GENERAL INFORMATION

KOMEEN provides effective control of *Hydrilla verticillata* in potable water reservoirs, recreational lakes, golf course, ornamental, fish and fire ponds, and industrial ponds. KOMEEN may be applied as an invert emulsion or through hoses dragged near the bottom of the body of water. Hydrilla will drop below the surface within three days after treatment. Complete effect of the treatment will be observed within 4-6 weeks. Because of the large number of possible combinations with other herbicides, the compatibility of KOMEEN with other herbicides should be determined before applying as mixture.

### SPECIFIC INSTRUCTIONS

**HYDRILLA VERTICILLATA: Direct Application:** Treat infested area with 8-16 gallons of KOMEEN per surface acre depending upon depth of water and density of the weed growth. Apply through weighted hoses which are dragged approximately six feet below the surface of the water or one foot above the lake bottom, whichever is applicable. Do not drag hoses on the bottom. For shoreline application, apply KOMEEN as a surface spray. Be sure to obtain uniform coverage.

**Invert Application:** For invert application, either a preinverted tank mix or an "in situ" formed invert may be used. Apply KOMEEN at the same rates as above. The invert should be applied through hoses dragged below the surface of the water. For very heavy growth, invert application may result in a streaking effect due to localized control where the hoses were dragged. For those areas a direct application is preferred. Always apply KOMEEN at the desired rate. Repeat application of KOMEEN to a treated area within a short time of the first treatment may not give the desired effectiveness.

Complete effect of the treatment will be observed within 4-6 weeks. In heavily infested areas, a second application may be necessary.

**CAUTION: Avoid contact with skin and eyes. In case of contact, wash thoroughly; for eyes, wash with copious amounts of water and get immediate medical attention. Seek medical attention if swallowed.**

**WARNING:** Concentrated KOMEEN may be harmful to grass, ornamental plants and other foliage. Do not apply KOMEEN to soil, to water that will flow to plants or grass, or to air. Apply only as directed on labels of herbicides, fungicides and emulsifiers or other materials used in mixture.

Treatment of aquatic weeds can result in oxygen depletion from decomposition of dead vegetation. This oxygen depletion is the greatest hazard to man and fish. This hazard is reduced by the water area's aeration operation and wait 10-14 days between treatments. Do not treat areas that drain to a pond, stream, or other water body. Do not treat areas that drain to a pond, stream, or other water body.

Use of KOMEEN and other herbicides in fish ponds and other aquatic waterways is limited to the use of the water for the control of weeds. Use of KOMEEN in fish ponds and other aquatic waterways is limited to the use of the water for the control of weeds. Use of KOMEEN in fish ponds and other aquatic waterways is limited to the use of the water for the control of weeds.
