NET CONTENTS 1 QT. (32 FL. OZ.)

APPLIED BIOCHEMISTS, Inc.

STOCKTRINE is a powerful algaecide that kills and prevents the growth of algae in stock watering tanks, troughs and ponds. It is safe for stock and does not harm the water. It is easy to use and can be applied by hand or with a pump sprayer. It is available in a concentrate form and can be diluted for use in large volumes of water. It is also available in a ready-to-use form. It is a fast-acting algaecide and can be used to treat existing algae problems or to prevent them from occurring. It is a non-toxic algaecide and can be used in stock watering tanks, troughs and ponds. It is a powerful algaecide that kills and prevents the growth of algae in stock watering tanks, troughs and ponds. It is safe for stock and does not harm the water. It is easy to use and can be applied by hand or with a pump sprayer. It is available in a concentrate form and can be diluted for use in large volumes of water. DIRECTIONS FOR USE

STOCKTRINE is a powerful algaecide that kills and prevents the growth of algae in stock watering tanks, troughs and ponds. It is safe for stock and does not harm the water. It is easy to use and can be applied by hand or with a pump sprayer. It is available in a concentrate form and can be diluted for use in large volumes of water. It is also available in a ready-to-use form. It is a fast-acting algaecide and can be used to treat existing algae problems or to prevent them from occurring. It is a non-toxic algaecide and can be used in stock watering tanks, troughs and ponds.

For best results, apply **STOCKTRINE** to the surface of the water in the watering tank, trough or pond. Use a pump sprayer or a hand sprayer. Do not use a fogger type sprayer. The first treatment should be made at the first visible sign of algae growth. If the entire pond or tank is not treated with a single application, treat the entire pond or tank with a single application. Wait 10-14 days between treatments. For best results, apply **STOCKTRINE** under favorable conditions. Use spray equipment after use.

NOTE: Concentrated **STOCKTRINE** may cause discoloration of galvanized metal. Use a plastic bucket for mixing.

FISH CAUTION: **STOCKTRINE** may be toxic to fish. Do not use in fish ponds. If fish are present, remove them from the water before applying **STOCKTRINE**. Do not use in water containing fish. Do not use in water containing fish.

CAUTION

Keep out of the reach of children. **STOCKTRINE** is a powerful algaecide that kills and prevents the growth of algae in stock watering tanks, troughs and ponds. It is safe for stock and does not harm the water. It is easy to use and can be applied by hand or with a pump sprayer. It is available in a concentrate form and can be diluted for use in large volumes of water. It is also available in a ready-to-use form. It is a fast-acting algaecide and can be used to treat existing algae problems or to prevent them from occurring.
