

Tabex Super Shock is a powerful oxidizing agent which helps reduce staining in pool water by reducing iron, manganese, and other elements such as sulfur, iron, and copper. It also helps remove organic matter, urine, perspiration, and other discharges. It is only as directed.

DIRECTIONS:

1. Use Tabex Super Shock at the rate of 1 pound per 10,000 gallons of swimming pool water. Add total required amount at one time. Scatter this granular product directly over the pool water surface. Use Super Shock only when pool is not in use. It will produce a temporary high chlorine level. Do not enter pool until the chlorine residual has dropped to a level of 2 parts per million as determined by a suitable test kit.

2. Between Super Shock applications, maintain required 1.0-1.5 ppm chlorine residual in pool water by using slow release Tabex Swimming Pool Chlorine Tablets in feeder, float or skimmer.

CAUTION: Never mix Tabex Super Shock with any other chemical. Do not use in feeder, float or skimmer. Always mix only with pool water by scattering product over pool surface.
