

[illegible]

Recent evidence has shown that the response with the α - β and γ waveforms and duration of the α - β waveform to a 100 Hz flicker is quite sensitive to the state of vigilance.

Figure 1. The effect of the concentration of the Cu^{2+} ions on the Cu^{2+} adsorption capacity of the Cu^{2+} adsorption resin. The concentration of the Cu^{2+} ions was 0.01, 0.05, 0.1, 0.5, 1, 5, 10, 50, 100, 500, and 1000 mg/L. The adsorption capacity was determined by the difference between the initial and final concentrations of the Cu^{2+} ions in the solution. The adsorption capacity was determined by the difference between the initial and final concentrations of the Cu^{2+} ions in the solution.
