

CARNEBON 200

**PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

CAUTION: Harmful if swallowed. Avoid contact with skin, eyes or clothing.

STATEMENT OF PRACTICAL TREATMENT

- If Swallowed:** Drink promptly a large quantity of water. Do not induce vomiting. Avoid alcohol. Get medical attention.
- If In Eyes:** Flush with plenty of water for 15 minutes. Get medical attention.
- If On Skin:** Wash with plenty of soap and water. Get medical attention if irritation persists.

NOTE TO PHYSICIAN

Probable mucosal damage may contraindicate the use of gastric lavage.

ENVIRONMENTAL HAZARD

This product is toxic to fish. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or public waters, unless this product is specifically identified and addressed in an NPDES permit. Do not discharge effluent containing this product to sewer systems without previously notifying the sewerage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

CHEMICAL AND PHYSICAL HAZARDS

Stabilized Chlorine Dioxide is a strong oxidizing agent. Contamination with other materials such as acids, toxic chlorine organic chemicals, etc., may cause a chemical reaction resulting in evolution of chlorine dioxide gases and heat. Explosion and/or fire could result. Chlorine dioxide is a poisonous explosive gas. Keep all chemical and foreign materials away from this solution.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Before using this product in the generation of chlorine dioxide for biological control in paper mills, food processing fumes, water treatment equipment, petroleum recovery, hospital disinfecting, air conditioning, cooling towers, hard surface disinfection or sanitization of food processing equipment, etc. see product data.

STORAGE AND DISPOSAL

Do not store with easily oxidizable materials, acids, reducers and combustible material. Avoid heat or freezing conditions. Store upright and do not store drums over 2 high on pallets or vertically filled drums. Use of a drum pump is suggested. Keep drum tightly closed when not withdrawing liquid. In case of leaks, dilute with large quantities of water. Do not allow liquid to dry because this could present a fire hazard. Store only in the original container and take care to prevent cross contamination with other pesticides, fertilizer, food and feed.

EMERGENCY HANDLING: In case of contamination or decomposition, do not reuse container. Isolate in an open well ventilated area. Flood with large volumes of water. Collect spilled drums in vicinity by water spray.

PESTICIDE DISPOSAL: Do not contaminate water, food or feed by storage or disposal. Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label directions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

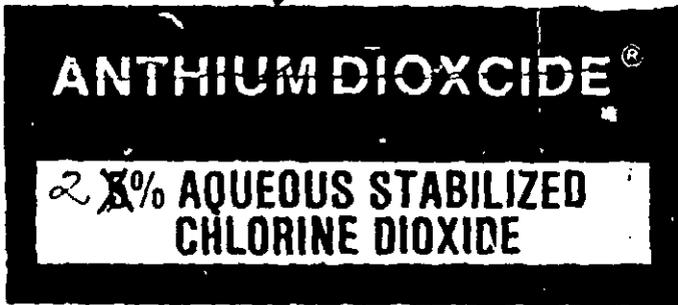

NOTICE: Seller expressly warrants that the product conforms to its chemical description. There are no warranties associated with the sale of this product either express or implied, including but not limited to the warranties of fitness for a particular purpose or use.

PRODUCT DATA

As a violation of Federal Law to use this product in a manner inconsistent with its labeling.

DISINFECT WALLS, CEILINGS, FLOORS, DRAINS, PIPE LINES AND UTENSILS

Before disinfection, all gross filth must be removed. Then clean the areas to be disinfected with a detergent solution.

FOR INSTITUTIONAL OR INDUSTRIAL USE ONLY

ACCEPTED

20 JUL 1989

Active Ingredients:
Chlorine Dioxide

Inert Ingredients:

Rodenticide Act. is amended, for the pesticide registration.

EPA Reg. No. 9150-3

KEEP OUT OF REACH OF CHILDREN

CAUTION

SEE SIDE PANELS FOR ADDITIONAL PRECAUTIONARY STATEMENTS

NET WT. _____ lbs.

INTERNATIONAL DIOXIDE INC.
CLARK, N.J. 07066

BEST AVAILABLE COPY

2.5
followed by a potable water rinse.
Add 11 oz of ANTHIUM DIOXIDE per gallon of solution to be used. Adjust the pH of the solution to 4.0 with acetic acid (vinegar), citric acid, phosphoric acid or add 2.5 grams of ACTIVATOR K to each gallon of solution. Allow to stand for 15 minutes.

2) Spray or fog the above solution onto surface to be disinfected. Allow to remain for at least 20 minutes but preferably longer and allow to air dry. Use suitable protective breathing apparatus when fogging or spraying. Then allow solutions to air dry. Always apply freshly prepared solutions.

4) For tank soaking of previously cleaned utensils heavily stained dishes and glasses, equipment parts, prepare the solution as described above. Fill and hold for 20 minutes. Drain and air dry.

TO CONTROL THE GROWTH OF BODOR AND SLIME AND IMPROVE TASTE IN ICE PLANTS AND POULTRY AND MEAT PROCESSING PLANT WATER

Directions for Use:

- 1) Thoroughly clean the ice making machinery with a detergent solution followed by a potable water rinse.
- 2) Meter into the incoming water to the ice plant potable water system 0.3 gal of ANTHIUM DIOXIDE per 1,000 gal of water (20 ppm available ClO₂).
- 3) As an additive to potable water in meat and poultry processing plants to inhibit bacterial slime and improve taste and odor, add 0.1 gallons of ANTHIUM DIOXIDE per 1,000 gallons of water.

TO CONTROL BODOR AND SLIME FORMING BACTERIA, MOLD AND MALARIA ON WALLS, FLOORS AND CEILINGS

Directions for Use:

- 1) Before treatment remove all gross filth, wash with detergent and rinse with potable water.
- 2) Spray or fog the walls, floors and ceilings with a solution of 0.1 gal of ANTHIUM DIOXIDE diluted to 20 gal. with water (200 ppm available ClO₂). Avoid breathing the mist. Use suitable respiratory protection. Avoid contact with food. Allow to air dry and repeat as necessary.

TO INHIBIT BACTERIAL SLIME FORMING BACTERIAL GROWTH IN COMMERCIAL WATER FILTRATION SYSTEMS, SAND BEDS, GRAVEL BEDS, CHARCOAL FILTERS AND COOLING WATER SYSTEMS.

Directions for Use:

- 1) Carefully back flush filters with potable water where possible to remove any accumulated solid residue and contamination.
- 2) Fill system with potable water and adjust the pH to 6.0 with citric acid, phosphoric acid or acetic acid (vinegar) or equivalent.
- 3) Add 0.1 oz of ANTHIUM DIOXIDE per gallon of filter system volume to the access hatch and circulate the system for 1 hour. Check the pH and bring back to 6.0. Has Certified. Bring the ClO₂ concentration back to 300 ppm.
- 4) Circulate the solution for 1 additional hour, discharge and then water wash for 30 minutes with potable water to remove the chlorine dioxide.

COOLING WATER SYSTEMS:

- 1) Add 1 gallon of ANTHIUM DIOXIDE per 10,000 gallons of cooling water every week.
- 2) Depending on the color and type of contamination, addition frequency may be reduced to every 2-3 weeks when contamination is under control.

IN INDUSTRIAL APPLICATIONS, INHIBIT THE GROWTH OF SLIME AND BODOR CAUSING BACTERIA IN WATER BASED CUTTING OILS

Directions for Use:

- 1) Add 0.1 oz of ANTHIUM DIOXIDE per thousand gallons to both system and repeat weekly or on first indication of increased bacterial contamination (odor, sludge, bacterial count) phasing systems may require higher concentration of ANTHIUM DIOXIDE.
- 2) Continuous Method - Proportion 1/2 gallon of ANTHIUM DIOXIDE per million gallons per day used in the system. All other systems may require higher concentration.
- 3) Batch Concentrated System - Slug dose system with 10 gallons of ANTHIUM DIOXIDE per million gal of cutting oil. Then start the continuous procedure described above.

Adjust quantities in any of the above systems to compensate for levels of contamination, pH, type of contamination, etc. as necessary.

TO PREVENT CORROSION AND SLIME BACTERIA IN ICE MILLS DURING SECONDARY RECOVERY OPERATIONS

Directions for Use:

- 1) Prepare a working solution of 5,000 ppm stabilized chlorine dioxide by diluting each gallon of ANTHIUM DIOXIDE used to 10-gal solution with low injection water.
- 2) Proportion 1 p.p.t. of the above solution into each 100 parts of recirculated acidified (3.0 - 4.0 pH) water.
- 3) Monitor microbial content of the water and increase or decrease the addition rate of the working solution as necessary.

FOR USE AS A TERMINAL FOOD CONTACT SURFACE SANITIZING RINSE CONFORMING TO 21 CFR 178.1010 paragraph b, 3d and c, 2d not requiring a subsequent potable water rinse.

Directions for Use:

- 1) This solution is intended for use as a food contact surface sanitizer for dairies, ice cream factories and food processing plants.
- 2) This solution may be used on hard surfaces such as tables, trays, bins, etc., and the interior or exterior of food processing equipment.
- 3) All equipment should be thoroughly cleaned to remove gross food particles and soil by pre-rinse or pre-soak and where necessary, a pre-soak treatment. The surfaces or objects should then be cleaned with a detergent or cleaner followed by a potable water rinse before application of the sanitizing solution.
- 4) The active ingredient in this system is free ClO₂ even though the stabilized chlorine dioxide at pH 6.5 is mainly bactericidal. Free ClO₂ is released by addition of an activator and/or acidulant. A solution containing 1,000 ppm of available chlorine dioxide is prepared by adding 1 gal of ANTHIUM DIOXIDE to 50 gallons of water or then adding 780 grams (1.71 lbs) of ACTIVATOR K per 50 gallons of solution. Allow to stand for 15 minutes after agitation for 5 minutes. As an alternate, this solution can be activated by addition of food grade citric acid, phosphoric acid or acetic acid (vinegar) to the pH to 4.0. Then dilute one part of this solution with 4 parts of water to give 200 ppm of free chlorine dioxide and about 125 ppm free ClO₂ (30 - 40 ppm free ClO₂ when acid activation is used).

AS A SANITIZER IN PAPER MILLS TO PREVENT SLIME, TAD SPOTS AND PITCH SPOTS IN WHITE WATER SYSTEMS

- 5) This solution should be allowed to contact all food processing equipment for at least 1 minute but preferably longer by transferring and/or spraying into each food processing vessel. It is essential that the sanitizing solution contact all surfaces to be sanitized. Thus, care to reach in place equipment, pipes, closed vessels, etc. should be fitted with the solution to ensure contact of all surfaces with the sanitizing solution. Use suitable protective breathing apparatus when spraying this solution on external equipment.
- 6) After the required contact time or longer the solutions are allowed to drain from all surfaces and air dried.
- 7) The above solution may not be reused for sanitizing but may be diluted to 1:5 with water and used for cleaning of walls, floors and drains of the plant.

AS A SANITIZER IN PAPER MILLS TO PREVENT SLIME, TAD SPOTS AND PITCH SPOTS IN WHITE WATER SYSTEMS

- 8) By maintaining a ClO₂ atmosphere in the white water, the microorganisms cannot produce the nodules which result in sludge.

Directions for Use:

- 1) If the pH of the white water is below 7.8, add 0.4-0.8 gallons of ANTHIUM DIOXIDE per hundred tons of paper produced.
 - 2) If the pH of the white water is above 7.8 then add 1/2 gallon of 50% sodium hypochlorite as an activator with each 0.2-0.4 gallons of ANTHIUM DIOXIDE.
- Continuous proportioning of the ANTHIUM DIOXIDE feed is recommended for best results. In many cases, the amount can be reduced after the system is clean.
