# APPLICATION

BAYLETON® fungicide is absorbed rapidly and works systematically from within the plant. Rainfall or sprinkler irrigation soon after application will assure rapid systemic uptake. Control will be less effective on turf suffering from drought stress. Therefore, in order to achieve maximum control, plants should be maintained in a vigorously growing state through good cultural practices.

Apply when the turf is fully established and actively growing. Application should be applied at recommended intervals to maintain disease control.

**SUGGESTED SPREADER SETTINGS** (available on final printed label)**Directions for homeowner products:**

It is important to follow the directions as indicated so that injury will not occur to your lawn. Spreader settings are approximate. Differences may occur due to condition of spreader, speed at which applied, and roughness of area treated. Be sure to check spreader at the beginning of the application; adjust spreader if necessary. Close spreader when filling, turning or stopping. **DO NOT HAND SPREAD.**

**Broadcast Spreaders:** For best results, apply in a circular path starting on the outside and working toward the center. A little overlap of wheels will ensure complete coverage. (directional diagram)

(BACK PANEL)

**Drop Spreaders:** First, apply 2 border strips along the edge of each end of the lawn. Then apply product along the length of the lawn, shutting off the spreader before turning as you reach the edge of the border strips. (directional diagram)

To determine how much you need, multiply the length of your lawn by its width. This equals your total square footage. Deduct any non-lawn areas (house, gardens, etc.) One bag covers X,XXX sq. ft.
