ALL-CLEAR CHLORINE TABLETS

- A most effective germicide and algicide.
- Will not cause cloudiness in water.
- Will not add scale forming minerals in the water.
- Will maintain your pool crystal clear.

INSTRUCTIONS

When starting up a new pool, superchlorinate to clarify, chlorinate, and to establish a chlorine residual of 1.0 ppm to 1.5 ppm. Add 1.5 lbs. of All-Clear Chlorine per 1,000 gallons of pool water. The next morning add All-Clear Chlorine Tablets to maintain the proper chlorine level.

All-Clear Chlorine Tablets are designed for use in automatic in-line feeding devices. Follow the manufacturer's recommendations for installation and adjusting the feed rate for the proper available chlorine level.

Test pool water frequently with a suitable in-line or striping test kit. A 1.0-1.5 ppm minimum range is ideal. A chlorine residual above 1.5 ppm adjust the setting to the next smaller number. If below 1.0 ppm adjust the setting to the next larger number.

An increase in water temperature, higher day or water temperature will cause your pool to use more chlorine. You should increase the feed rate accordingly. In the summer, at the maximum setting, the dosing time should be increased to compensate for the necessary usage.

When the tablets are nearly exhausted, you should adjust the setting to the residual of the chlorine test kit. Keep the pH between 7.4 and 7.6 as determined by a test kit.
