DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

PAPER MILL SLIME CONTROL: FOR THE CONTROL OF SLIME-FORMING AND/OR SPOILAGE BACTERIA: AMA[®]-31 is added at a point in the system (raw stock chest, beater and/or refiner chest, or machine chest-wirepit) where it will be uniformly mixed. Application may be continuous or intermittent for a certain number of hours per day or per shift, depending upon system characteristics. Add 6 to 30 fluid ounces of AMA[®]-31 per ton of paper produced.

INTERMITTENT FEED METHOD: Apply 18 to 30 fluid ounces of AMA[®]-31 per ton (dry basis) of pulp or paper produced for 2 hours every 8 hours. Badly fouled process systems must be cleaned before initial treatment.

CONTINUOUS FEED METHOD: Apply 6 to 20 fluid ounces of AMA[®]-31 per ton (dry basis) of pulp or paper produced on a continuous basis. Badly fouled process systems must be cleaned before initial treatment.

OILFIELD DRILLING MUDS AND WORKOVER OR COMPLETION FLUIDS: FOR CONTROL OF SLIME-FORMING AND/OR SPOILAGE BACTERIA: Determine the total volume of the circulating system. Calculate the number of gallons of AMA[®]-31 needed to produce a concentration of 1,600 ppm (0.56lb/bbl) of AMA[®]-31 in the drilling mud circulating system. For example, 59 gallons of AMA[®]-31 per 1,000 barrels of drilling fluid will produce the proper concentration. For best results, add AMA[®]-31 in a thin stream to the mud pit while drilling fluid is circulating. As the total volume increases, due to greater well depth, add additional AMA[®]-31 to maintain the proper concentration. Because of the wide variation in drilling mud composition and bacterial contamination, greater or lesser amounts of AMA[®]-31 may be prescribed.

OILFIELD WATER TREATMENT AND WATER FLOODS: FOR CONTROL OF SLIME-FORMING AND/OR SPOILAGE BACTERIA: Calculate the total volume of water to be treated. Using this volume, calculate the number of gallons of AMA[®]-31 needed to produce a concentration of approximately 967 ppm AMA[®]-31. For example, 0.84 gallons of AMA[®]-31 per 1,000 gallons of total volume will produce this dilution. 200 ppm AMA[®]-31, added each week is recommended to maintain bacterial control. This may be accomplished by adding 0.17 gallons of AMA[®]-31 to each 1,000 gallons of total volume.

Because of the wide variation in waters found in the oil fields, greater or lesser amounts of AMA[®]-31 may be prescribed.
