USE DIRECTIONS

BMC ALGAECIDE NO. 30 is a highly effective fungicide and bactericide for use in controlling the growth of bacteria and fungi found in industrial recirculating water cooling towers, air washers, and evaporative condensers.

INDUSTRIAL RECIRCULATING WATER COOLING TOWERS AND EVAPORATIVE CONDENSERS:

Dosages for industrial recirculating water cooling towers or evaporative condensers will depend on the condition of the system prior to treatment initiation. Systems which are heavily contaminated should be cleaned first. Apply BMC ALGAECIDE NO. 30 to the cleaned system or when growth is first noticed, according to the following schedule:

INITIAL DOSE: Apply 13.6 ounces of product per 1000 gallons of water in the system (120 ppm). This dose may be repeated once, twice, or three times weekly or as required to control the growth of slime-forming organisms.

SUBSEQUENT DOSE: When microbial control is evident, add 2.18 to 4.36 fluid ounces of BMC ALGAECIDE NO. 30 per 1000 gallons of water (20-40 ppm) in the system every three days or as needed.

AIR WASHERS

In treating air washer systems, pre-clean by introducing a suitable detergent solution into the system and allow air washer to run with fan off for two hours. Flush. Check all nozzles and manually clean those that are plugged. Add product as specified under dosages for cooling towers.
