AMOUNT TO USE

Apply this product at the rate of 15 pounds (the contents of this bag) to weed and feed 5,000 sq.ft. of lawn. This application is equivalent to approximately 2 pounds of Atrazine per acre. A second application, (maximum of 2 per year to same area), may give best weed control and continued turf response to fertilizer.

WHEN TO APPLY

For best results apply before weeds come up. Established weeds are more difficult to control and may require an application in the spring and in the fall. Usually application made between January 1 and March 1 give the best control although applications may be made through June 15th with good control of most weeds listed. To control certain winter weeds such as Henbit, Chickweed, Rabbit Tobacco, Florida Betony and Evening Primrose, a fall application will be required.

IMPORTANT USE PRECAUTIONS

DO NOT APPLY THIS PRODUCT ON, OR OVER, THE ROOT ZONE OF ORNAMENTAL TREES, SHRUBS, BEDDING PLANTS, FLOWERS, OR GARDEN PLANTS OR INJURY TO THESE PLANTS MAY RESULT.

- May be applied to newly sprigged St. Augustine and Zoysia lawns one week after sprigging to prevent competition from germinating weeds.
- Do not plant any crop (flower or vegetable gardens) to treated areas for 18 months or injury may result.
- Apply this product only when grass blades are dry. When daytime temperatures are 80°F or above, water sufficiently to rinse particles off the grass blades.

Your local agricultural agencies can provide further information on the type of soil in your area and the location of ground water.

This product is toxic to aquatic invertebrates. Do not apply directly to water. Runoff and drift from treated areas may be hazardous to aquatic organisms in neighboring areas. AMOUNT TO USE

Apply this product at the rate of 15 pounds (the contents of this bag) to weed and feed 5,000 sq.ft. of lawn. This application is equivalent to approximately 2 pounds of Atrazine per acre. A second application, (maximum of 2 per year to same area), may give best weed control and continued turf response to fertilizer.

WHEN TO APPLY

For best results apply before weeds come up. Established weeds are more difficult to control and may require an application in the spring and in the fall. Usually application made between January 1 and March 1 give the best control although applications may be made through June 15th with good control of most weeds listed. To control certain winter weeds such as Henbit, Chickweed, Rabbit Tobacco, Florida Betony and Evening Primrose, a fall application will be required.
