

[9422-a]

INGREDIENT STATEMENT

BUG GUARD Aerosol No. 2 Insect Killer contains a highly effective insecticide formulation specially designed for use in automatic mist dispensing units around Restaurants, Stores, Dairies, Motels, Hotels, Hospitals, Food Processing Establishments and other areas where flies, gnats, moths, and mosquitoes are an annoyance

ACTIVE INGREDIENTS

Pyrethrins	00.9%
Piperonyl Butoxide Technical*	9.00%
Petroleum Hydrocarbons	10.1%
Inert Ingredients	80.00%

*Equivalent to 7.2% of (butylcarbityl) (6-propyl-piperony) either and to 1.8% of related compounds.

DIRECTIONS

Unit should be mounted 7 ft. above floor and should not be located closer than 12 ft. from exposed food. When properly installed — one automatic mist dispensing unit containing a can of BUG GUARD Aerosol Insect Killer is usually sufficient to treat 6,000 cubic feet of air space. The automatic sprayer will release 100 mg. of material every 15 minutes. Its effectiveness on flying insects will usually be noticeable within one hour after the machine has been activated. Two hours of continuous operation will generally suspend enough insecticide in the air to reduce the number of flying insects present on the premises.

INSECT KILLER

CAUTION:

Keep out of reach of children
See side panel for other cautions

G V ENTERPRISES, INC.
504 Whiting St., Grass Valley, Calif.

NET WEIGHT 12 OUNCES

Maximum insect control is maintained when the automatic mist dispensing unit is allowed to run continuously for 24 hours per day. If less than 24 hours of operation per day is desired—the machine should then be set to start at least one hour before effective insect control is required and allowed to run continuously until control is no longer required.

Such factors as temperature, humidity, shape of space to be treated and rate of air change have an important bearing on insect activity and the maintenance of effective insect control. Under normal circumstances one properly placed automatic mist dispensing machine will be able to effectively treat an average 6,000 cubic feet enclosure.

One can of BUG GUARD Aerosol Insect Killer contains approximately 3,300 "shots". This is sufficient to operate for a total of 825 hours or 34 days on a 24-hour per day basis—or 68 days on a 12 hour per day basis. It is suggested that a new container be installed every month when operating on a 24-hour per day basis and every two months when operating on a 12-hour per day basis.

WARNING

Contents under pressure. Do not puncture. Do not use or store near heat or open flame. Exposure to temperatures above 130 may cause bursting. Never throw container into fire or incinerator.

Do not use in nurseries or rooms where infants, ill, aged or debilitated persons are confined. Remove pets, birds and cover aquariums before spraying.

INGREDIENT STATEMENT

BUG GUARD No. 3 Insect Killer contains a highly effective insecticide formulation, specially designed for use in automatic mist dispensing units in Restaurants, Stores, Dairies, Motels, Hotels, Hospitals, Food Processing Establishments, where flea infestations, and other insect infestations occur.

ACTIVE INGREDIENTS

Permethrin	1.00%
Pyrethrin, Butoxide Ester	2.00%
N.O.C. 15, Cyfluthrin Chloride	3.34%
Pyrethrin, Ester	13.66%
LAERTIN, Resin	80.00%
Other Inactive Ingredients	1.6%
Net Weight	12.00

DIRECTIONS

Unit should be mounted 7 ft. above floor and should not be located closer than 12 ft. from exposed food. When properly installed, the automatic mist dispenser will maintain a concentration of BUG GUARD No. 3 Aerosol Insect Killer in the air at a level to treat 6 (00) sq. feet of area per hour. The automatic sprayer will release 100 mg. of material every 15 minutes. The effectiveness against insects will depend on the treatment with the unit. After the machine has been activated, the concentration of the insecticide will generally be sufficient to control insects present in the premises.
