

FRONT

GOLDEN SEAHORSE SWIMMING POOL  
Algaecide

ACTIVE INGREDIENTS

n - alkyl (C<sub>14</sub>, C<sub>12</sub>, C<sub>16</sub>)  
dimethyl benzyl  
ammonium chlorides 10%

INERT INGREDIENTS

Detonized water and Ethanol 90%  
100%

CAUTION: KEEP OUT OF REACH OF CHILDREN  
Undiluted Golden Seahorse swimming pool algaecide  
concentrate may cause skin irritation or damage to the  
eyes. Harmful if swallowed. Avoid contact with skin  
and eyes. Do not take internally. In case of contact  
with skin or eyes, flush immediately with plenty of  
water. For eyes, get medical attention. Avoid  
contamination of food. Nontoxic to humans in  
recommended pool dilutions.

Manufactured by  
CLACK CORPORATION, MADISON, WISCONSIN 53713  
U. S. A.  
Contents One Gallon U. S. D. A. Reg. No. \_\_\_\_\_

#### LEFT-SIDE

The presence of algae in out door swimming pools is objectionable because of the color, cloudiness, odor, and increased chlorine demand of the water. The use of Golden Seahorse algaecide will help to maintain the water in a clean condition.

#### RIGHT-SIDE

Golden Seahorse algaecide is compatible with the usual water treatment chemicals. By controlling algae growth with Golden Seahorse algaecide, the chlorine demand of the pool may be significantly reduced. Golden Seahorse algaecide contains no heavy metals such as mercury, copper, phenols or available chlorine.

#### BACK PANEL DIRECTIONS

1. In freshly filled pools or pools showing no visible algae growth add one gallon of Golden Seahorse algaecide per 50,000 gallons of water to prevent algae growth.
2. If Algae growth is observed, add one gallon Golden Seahorse algaecide for each 20,000 gallons of water to kill and control those algae species most commonly found in swimming pools. When existing growth is dead and algae have withered, clean the pool, drain and refill if necessary, and add one gallon Golden Seahorse algaecide per 50,000 gallons of water.
3. If the pool water treated as in (1) or (2) is recycled, add one gallon of Golden Seahorse algaecide per 50,000 gallons of water every five to seven days to maintain between two and five parts per million of active ingredient. See your serviceman for a test kit.
4. If the pool water treated as in (1) or (2) above is not recycled or not filtered it should be tested periodically to determine the active ingredient content. When necessary, one gallon of Golden Seahorse algaecide per 50,000 gallons of water should be added to maintain two or five parts per million of active ingredient.
