

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Do not use in nurseries or rooms where infants, ill or aged persons are confined. Large drafts of forced ventilation may reduce or eliminate the insecticidal efficacy of these installations. Do not install directly over any food handling or dispensing area. Do not allow spray to contact plastic, painted or varnished surfaces.

CAUTION: CONTENTS UNDER PRESSURE. DO NOT USE OR STORE NEAR HEAT OR OPEN FLAME. DO NOT PUNCTURE OR INCINERATE CONTAINER. EXPOSURE TO TEMPERATURES ABOVE 130° F MAY CAUSE BURSTING.

INGREDIENT STATEMENT: Purge II Concentrated Aerosol Insect Killer contains a highly effective insecticide formulation specially designed for use in automatic mist dispensing units in non-residential food handling establishments, commercial or institutional kitchens, dining areas and pantries of restaurants, supermarkets, food plants, food warehouses, bottling plants, hospitals, hotels, motels, stores, dairies, stables, nursing homes, day-care centers, egg and milk handling areas of dairies and chicken houses, where flies, mosquitoes, small flying moths and gnats are an annoyance.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

For Use in Aerosol Dispenser. One dispenser unit should be installed for each 12,000 cubic feet of space to be treated. The Dispenser activates the metered valve once every 15 minutes; after two hours of operation, enough insect killer is suspended in the air to kill a substantial proportion of the flies, mosquitoes and gnats present.

Usually the effectiveness of Purge II will be noticeable within one hour after the Dispenser is activated. If less than 24 hour control is required, the Dispenser should be set to start one hour before control is desired and run one hour after control is no longer needed. Keep in mind that such factors as air flow rate, size of space treated, humidity and room temperature all affect insect activity and control. Therefore, one unit per 12,000 cubic feet should be considered as an average need with adjustments made depending on specific conditions at place of usage. As with any method of insect control, best results are achieved when sanitation and other positive insect prevention practices are followed.

This 16 oz. can contains approximately 3,100 "shots" sufficient to sustain operation for a total of 32 days on a 24-hour basis. When used on a 24-hour basis, it is suggested that the container be changed once a month.

STORAGE & DISPOSAL

Do not contaminate water, food or feed by storage or disposal. STORAGE: Store in a cool dry place away from heat or open flame. DISPOSAL: Do not reuse empty container. Replace cap, wrap container and put in trash collection.

Authorized for use under USDA Inspection & Grading Programs.

E.P.A. Reg. No. 9444-1
