DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

TO DISINFECT [AND DEODORIZE]: To disinfect nonfood contact surfaces only: Use a wipe to remove heavy soil as needed. Unfold a clean wipe and thoroughly wet surface. Allow treated surface to remain wet for a full two (2) minutes. Use additional wipe(s) if needed to assure continuous two (2) minute wet contact time. Let air dry. *[When TB is included on the label, add the following or use the TB directions below:]* These directions also apply to *Mycobacterium bovis* BCG (Tuberculosis) at 68°F (20°C).

[The following sets of directions are optional and for hospital/medical facility use only:
Tuberculosis (TB) [Outbreaks]: This product is effective against *Mycobacterium bovis* BCG (Tuberculosis) in one minute at 68°F (20°C). Use a wipe to remove heavy soil as needed. Unfold a clean wipe and thoroughly wet surface. Allow treated surface to remain wet for one (1) full minute. Use additional wipe(s) if needed to assure continuous one (1) minute wet contact time. Let air dry. Although efficacy at a one (1) minute contact time has been shown to be adequate against TB, this time is not sufficient for other organisms on the label. Therefore a 2 minute wet contact time must be used for all listed non TB organisms.

and/or

Ultrasound transducers and probes: For use on external surfaces of ultrasound transducers and probes only.

To disinfect: Pre-clean gel from external surface of ultrasound transducer or probe to be disinfected by using a clean washcloth. Then thoroughly wet the probe with a wipe. Allow treated surface to remain wet for a full two (2) minutes. Use additional wipe(s) if needed to assure continuous two (2) minute wet contact time. Let air dry.]
